Amendments to the Specification

Please replace the paragraph beginning on page 8, line 26 of the application with the following amended paragraph:

The imaging apparatus 62 comprises a color selector 621, a PBS <u>polarizing</u> <u>beam splitter (PBS)</u> 625, two liquid crystal panels 622,623 and a lens 624. The color selector 621 is adapted for selecting the desired color and its complementary color. The PBS 625 is used for receiving the p-polarized light from <u>the polarizer 54 of</u> the illumination device 61. The two liquid crystal panels 622,623 are reflective liquid crystal on silicon (LCoS) panels 622,623 and comprise a plurality of pixels respectively for producing the desired image and projecting the image through the lens 624. <u>That is, the PBS 625 directs light from the polarizer 54 toward a panel 622 or 623 producing an image to be projected.</u>

Theoretically, if the p-polarized-light from the illumination device 61 is pure p-polarized light, the color selector 621 and the liquid crystal panel 622 can be omitted. However, in actual condition, the p-polarized light from the illumination device 61 is not pure p-polarized light and may have less s-polarized light; therefore, the color selector 621 and the liquid crystal panel 622 cannot be omitted. The p-polarized light passes through the PBS 625 directly and then is reflected by the liquid crystal panel 623. The s-polarized light is reflected by the PBS 625, then reflected by the liquid crystal panel 623, and then passes through the PBS 625 directly.

Please add the following new paragraph to the application after the paragraph beginning on page 8, line 26:

Theoretically, if the p-polarized light from the illumination device 61 is pure ppolarized light, the color selector 621 and the liquid crystal panel 622 can be omitted. However, in actual condition, the p-polarized light from the illumination device 61 is not pure p-polarized light and may have less s-polarized light; therefore, the color selector 621 and the liquid crystal panel 622 cannot be omitted. The p-polarized light passes through the PBS 625 directly and then is reflected by the liquid crystal panel 623. The s-polarized light is reflected by the PBS 625, then reflected by the liquid crystal panel 623, and then passes through the PBS 625 directly.
